

Newsletter #53
wb 17th January

GREAT NEWS!

Things are looking up for
Humpback Whales!

Following an annual review
by The Wildlife Trusts in
2021, it has been reported
that whale sightings in the UK
have increase.

Big Schools' Birdwatch 2022

There is still time to register
for RSPB's annual birdwatch
(submissions close 21st
February).

By taking part you can help
tell the RSPB how birds are
faring across school ground
in the UK.

Share your eco win of
the week with us!

The Ink Bin Schools

Is your Ink Bin ready to be
emptied and collected?
It's super easy to arrange a
collection- just head to The
Ink Bin website and click on
Empty Our Bin for
instructions.

No Need
To Print!

This Week in Your Eco Club...

Keeping Safe but Warm

With the weather getting colder and the need for ventilation in classrooms to help reduce the spread of coronavirus, it is important to keep windows open to keep safe. However, it is also important to keep warm and comfortable. Some ways you can do this is by wearing extra layers, having warm squash at break or wiggling your toes and fingers around.

Did you know that the fresh air is not only good at keeping everyone safe, it can also help to keep your mind working at full capacity? This is because the brain uses 20% of the body's oxygen supply, so by allowing fresh air into the classroom you can keep up your concentration.

TEACHERS.. WhatsApp your images to us on 07712 577528 and save the number to your phone contacts!

Top Tip

To keep warm in the classroom this winter, why not suggest to your teacher about having a 'Busy Body Break' to increase blood flow and circulation, keeping you even warmer.

Covid in schools: 'Fresh air will help stop the spread'

Classroom windows are open this winter in line with Covid advice to keep England's schools ventilated.

Eco-friendly Flying

In a bid to fight climate change, Denmark have pledged to make all domestic flights fossil fuel free by 2030. The president of Denmark said she wanted to make flying green, alongside a goal of cutting carbon emissions of the country of 70% by 2030

The Ink Bin's Eco Tip of The Week

When on walks, try your best to stick to the path when you can. By doing this, you can make sure that you're not trampling on animals' homes and habitats.

Mechanical Trees

Mechanical trees that suck out CO₂ from the atmosphere are now being trialled. The new invention is said to remove CO₂ from the atmosphere 1000x faster than real trees. The 'trees' were developed at Arizona State University in hopes to majorly cut carbon emissions

in the news:

In Bali, Indonesia, 33 endangered green sea turtles have been released into the ocean to try and increase their population. There are also attempts to protect these turtles, saving them from poachers to reduce the threat of extinction.
